April 13th, 2019 - Transaction per second TPS is the number of transactions executed per second In other words it can be calculated based on how many transactions are executed over a certain duration of the test and then calculate it for a second For example if a vuser executes 6 transactions every minute then the TPS would be…

LoadRunner Vu Scripting Wilson Mar
The VuGen Script File Development Process

These steps are part of an overall corporate Approach to Managing Performance. Define the test project’s objectives, environment, scripts, data, hardware, etc. The assumptions for the script should reference coding standards, conventions. I code HTML to create a webpage that I can link to in my status reports.

Quick Overview of New Features of HP ALM a Wonderful Substitute of HP QC 10.0

In the last article, we brought to you information on upgrades in the certification exams like HP QC 10.0 and HP QTP 10.0 to newer versions like v11.x. Now, we are discussing some of the key enhancements in the v11.x version that every user of HP QC eagerly desires to know.

LoadRunner Architecture by Wilson Mar

Virtual Users, Vusers, are a unique feature of LoadRunner. Unlike a WinRunner workstation which emulates a single user’s use of a client, LoadRunner can emulate thousands of Virtual Users. Load generators are controlled by VuGen scripts which issue non-GUI API calls using the same protocols as the client under test. But WinRunner GUI Vusers emulate keystrokes, mouse clicks, and other User Interface actions on the client being.

LoadRunner Advanced Trace Saves the Day by Scott Moore

Here’s a new geeky technical article for all my HP LoadRunner buddies. Recently, I had to work with a web application built on JSON. The page would display a different number of records for each distinct user ID.
