Introduction

1. Engineering Asset Management (EAM) as a discipline addresses the value contribution of EAM to an organization's success. According to Amadi, Echendu et al. (2007), the EAM system may be defined as the system that plans and controls the asset-related activities and their relationships to ensure the asset performance that meets the intended competitive strategy of the organization.

2. Quality Management

   - Quality management ensures that an organization's product or service is consistent. It has four main components: quality planning, quality assurance, quality control, and quality improvement. Quality management is focused not only on product and service quality but also on the means to achieve it.

3. The Americans with Disabilities Act (ADA) was signed into law in 1990 and amended in 2008, offering broad protection to disabled individuals in the workplace, in public spaces, and in academia. Logistics is generally the detailed organization and implementation of a complex operation in a business sense. Logistics is the management of the flow of things between the point of origin and the point of consumption in order to meet requirements of customers or corporations. The resources managed in logistics may include tangible goods such as materials, equipment, and supplies, and in some cases, public records requests.
