Timber framing adds roughly 25 more cost than a conventional home and roughly 10-15 more than timber post and beam. Timber post and beam construction shares with timber framing an appreciation for the beauty of wood and careful connections but nods in deference when it comes to purity of tradition and level of craft, one of the most popular styles post and beam uses full logs as a structural support providing a natural log surface inside and outside the home. Fewer logs are used compared to a full scribe style making these homes more cost effective if you find a design and plan you like we can help you customize it to meet your needs.

Log post and beam structures are an attractive alternative to full log structures. Sometimes people do not want a full log structure but they still love the look of logs in a situation such as this, full logs will quite often become incorporated with other construction styles.

About our timber frame and post & beam log cabin homes, timber frame systems create a framework of vertical posts and horizontal beams that are exposed on the interior of the log home providing structural support while allowing for choices in materials for interior and exterior finishes from contemporary to rustic. They add majestic decorative style along with flexibility to add color and to.

Post & beam structures are very flexible and consist of round vertical log posts that carry large horizontal logs on top. Timber frame log homes and timber frame and post & beam log homes are very similar. The main difference is that timber frame cuts the logs square rather than using round logs. Log post & beam log post and beam homes are a true combination of log homes and timber frame construction those who like the look of logs and the flexibility of design and traditional timber frame joinery love this style. Logs are incorporated to frame the structure and provide the unique character of the home visible within and outside the home.

Log post & beam is a traditional method of home construction. How you can tell it's a post & beam home well. This one is trickier, while the log home can be relatively easy to pick out because of its use of logs, the only difference between post & beam homes and timber frame homes is the type of joinery used to make connections in the structure, post and beam log homes are a specialty of Nicola Logworks. From our production location of Merritt BC, we have provided these log homes in the USA, Japan, and Denmark. Come learn more about them, Sand Creek Post & Beam is the leading manufacturer of rustic wood barns, barn homes and wedding venues filled with character, solid, safe, and built to last generations.
