Logistics or supply chain management is a small portion of supply chain management that deals with management of goods in an efficient way. Although if we talk about supply chain management, it is a broader term which refers to the connection right from the suppliers to the ultimate customer. Logistics deals primarily with the planning and transportation of goods from one location to another. The purpose of logistics operations is not only to deliver traditional in service logistics support for weapon systems but also to provide logistics services as demand requires. Operations management deals with the designing and controlling the process of production and business operations dealing with goods or services. Logistics is a segment under operations management. Supply chain management encompasses supply chain management, business analytics, logistics, production, and service operations management. Research management, science, lean production, project management, and statistics are some elements of supply chain management. The supply chain management community, which consists of academics, Ph.D. students, and practitioners, has an important role in moving the field of supply chain management forward. The purpose of the N23 Logistics Operations Program is not only to deliver traditional in-service logistics support for weapon systems but also to provide logistics services as demand requires. Operations management deals with the designing and controlling the process of production and business operations dealing with goods or services.
forward and reverse flow and storage of goods services and related information between the point of origin and the point of consumption in order to meet customer requirements.
